This document contains confidential information of OrbitAvanya Tech LLP and its affiliates and/or licensors ("OrbitAvanya"), which may include trade secrets, proprietary methodology, and business information. The recipient acknowledges that this information — including the AVANYA AI architecture, the underlying methodology, frameworks, schemas, and pipeline design referenced or described herein — has been developed by OrbitAvanya as valuable trade secrets. All information contained herein shall remain the exclusive property of OrbitAvanya and shall be disclosed only to persons who have a need to know. The recipient agrees not to copy or reproduce in any form, any information supplied herein without prior written permission from an authorized representative of OrbitAvanya. Recipient further agrees to provide security for this document to a reasonable degree so that unauthorized disclosure is prevented. Reciprocally, OrbitAvanya acknowledges that information shared by the recipient during proposal review and any subsequent engagement — including customer evidence, deployment data, internal product detail, sales performance metrics, and proprietary positioning content — constitutes confidential information of the recipient. OrbitAvanya agrees to protect such information to the same standard set forth above and to use it solely for the purposes of the engagement contemplated herein.

Executive Summary

OrbitAvanya Tech LLP (AvanyaEdge) is pleased to submit this proposal for the Design, Development, Implementation, Deployment, and Maintenance of the Contractor Management System (CMS) for the Irrigation Department. The proposed CMS platform is designed to provide a secure, scalable, transparent, and centralized digital solution for managing contractor registration, empanelment, renewals, approvals, monitoring, and departmental workflows through an integrated web-based system.

The Contractor Management System (CMS) will help modernize and streamline existing manual and paper-based processes by enabling automated workflows, digital document management, role-based approvals, application tracking, real-time reporting, and centralized data handling. The system is envisioned as a future-ready platform capable of supporting departmental expansion, workflow customization, policy updates, and future integrations with government services and third-party systems.

The proposed solution will provide dedicated login access and dashboards for contractors, departmental officers, committee members, administrators, and senior management authorities. Contractors will be able to submit applications online, upload required documents, track application status, receive notifications, and manage renewal requests through a user-friendly interface. Department officials will have access to approval workflows, document verification systems, monitoring dashboards, MIS reports, analytics, and operational tracking tools for efficient management and decision-making.

Key features of the proposed CMS platform include:

- Online contractor registration and renewal
- Multi-level approval workflow management
- Role-based dashboards and access controls
- Secure document upload and verification
- Application tracking and notifications
- MIS and analytical reporting
- Audit trails and activity monitoring
- Complaint and grievance management
- Archive and record management
- Optional payment gateway and DSC integration

OrbitAvanya Tech LLP proposes to develop the platform using modern, secure, and scalable open-source technologies with strong focus on usability, performance, security, transparency, and maintainability. The engagement includes requirement analysis, UI/UX design, development, testing, deployment, training, documentation, implementation support, and Operations & Maintenance (O&M) services.

With extensive expertise in enterprise applications, workflow automation, ERP systems, and government-oriented digital solutions, OrbitAvanya Tech LLP is committed to delivering a reliable, efficient, secure, and future-ready Contractor Management System aligned with the Irrigation Department's digital transformation objectives.

Respectfully,

Ranjeet Kumar Singh

Founder & CEO

OrbitAvanya Tech LLP (AvanyaEdge)

Engagement summary

What We Propose

OrbitAvanya Tech LLP (AvanyaEdge) proposes to design, develop, implement, deploy, and maintain a centralized Contractor Management System (CMS) for the Irrigation Department. The proposed engagement includes complete end-to-end services covering requirement analysis, UI/UX design, application development, workflow automation, testing, deployment, training, Operations & Maintenance (O&M), and implementation support.

The CMS platform will digitize and streamline contractor registration, empanelment, renewal, approvals, monitoring, reporting, and departmental workflows through a secure and scalable web-based solution. The system will provide role-based dashboards, document verification workflows, audit tracking, notification systems, MIS reporting, and centralized contractor management capabilities.

The engagement is proposed with:

- One-Time Development & Deployment
- Training & Capacity Building
- One Year Operations & Maintenance (O&M) Support
- Optional Future Enhancements & Integrations

Why This Engagement, Why Now

The Irrigation Department requires a modern and centralized digital platform to replace manual and paper-based contractor management processes. Existing workflows often result in delays, operational inefficiencies, limited visibility, document management challenges, and dependency on manual coordination.

The proposed CMS platform addresses these challenges by enabling:

- Transparent digital workflows
- Faster application processing
- Centralized contractor database management
- Real-time monitoring and reporting
- Improved departmental coordination
- Enhanced accountability and auditability
- Secure document handling and verification
- Reduced manual workload and operational overhead

With increasing focus on digital governance, operational transparency, and workflow automation, implementing a scalable Contractor Management System is essential for improving service delivery and administrative efficiency.

Engagement Outcome

The proposed engagement will deliver:

- A centralized Contractor Management System (CMS)

- Online contractor registration and renewal workflows
- Multi-level approval and verification mechanisms
- Role-based dashboards for officers and administrators
- Secure document upload and verification system
- Real-time application tracking and status monitoring
- MIS, analytics, and reporting dashboards
- Notification and communication system
- Audit trails and operational tracking
- Complaint and grievance management module
- Archive and historical record management
- Training, technical documentation, and user support
- One Year Operations & Maintenance (O&M) support

OrbitAvanya Tech LLP is committed to delivering a secure, scalable, future-ready, and government-compliant CMS platform aligned with the Irrigation Department's digital transformation objectives

Strategic context

Three findings from the diagnostic phase shape this engagement.

Three key findings shape the proposed Contractor Management System (CMS) engagement for the Irrigation Department.

Finding 1 · Existing contractor management processes are fragmented and manually intensive

The current contractor registration, approval, renewal, and monitoring processes involve multiple manual workflows, physical documentation, decentralized records, and limited real-time visibility. These operational challenges result in delays, reduced transparency, increased administrative workload, and difficulties in tracking application status and departmental performance.

The proposed CMS platform addresses these challenges through centralized digital workflows, automated approvals, secure document management, real-time monitoring, and role-based access management.

Finding 2 · The Department requires a centralized and scalable digital governance platform

The Irrigation Department requires a modern, secure, and scalable platform capable of supporting multi-level departmental workflows, contractor lifecycle management, reporting, analytics, and future departmental expansion.

The proposed CMS platform is designed to:

- Digitize contractor registration and renewal workflows
- Enable transparent approval and verification mechanisms
- Provide centralized contractor database management
- Support real-time reporting and analytics
- Improve operational efficiency and accountability
- Reduce dependency on paper-based processes
- Support future integrations and workflow enhancements

The engagement focuses on building a future-ready digital infrastructure aligned with modern e-governance and digital transformation objectives.

Finding 3 · Operational visibility, reporting, and workflow tracking need significant improvement

Current systems often lack centralized dashboards, audit tracking, workflow analytics, historical records, and automated communication mechanisms. This limits monitoring capabilities and delays decision-making processes.

The proposed CMS engagement will address these operational gaps through:

- Role-based dashboards for officers and administrators
- Real-time application status monitoring
- MIS and analytical reporting
- Audit trails and activity logs
- Notification and alert systems
- Archive and historical record management
- Complaint and grievance tracking
-

In addition, the engagement includes training, technical documentation, deployment support, and One Year Operations & Maintenance (O&M) support to ensure long-term system stability, usability, and departmental adoption.

OrbitAvanya Tech LLP (AvanyaEdge) is committed to delivering a secure, scalable, transparent, and future-ready Contractor Management System that supports the Irrigation Department's operational modernization and digital governance initiatives.

Scope of work

The proposed engagement includes the complete Design, Development, Implementation, Deployment, Training, and Maintenance of the Contractor Management System (CMS) for the Irrigation Department. The CMS platform will be developed as a centralized, secure, scalable, and workflow-driven web application designed to streamline contractor registration, approvals, renewals, monitoring, reporting, and departmental coordination.

The engagement covers all major phases of the project lifecycle, including requirement analysis, UI/UX design, application development, workflow automation, testing, deployment, training, documentation, and One Year Operations & Maintenance (O&M) support.

The scope of work is structured into the following core implementation areas:

1. Requirement Analysis & System Planning

This phase includes:

- Stakeholder discussions and requirement gathering
- Existing workflow analysis
- Functional and technical requirement documentation
- Process mapping and workflow planning
- System architecture planning
- Project execution planning

Deliverables:

- Requirement Specification Document
- Workflow & Process Mapping
- Project Plan & Execution Strategy

2. UI/UX Design & Application Architecture

This phase focuses on creating a user-friendly, responsive, and role-based interface for all stakeholders.

Deliverables:

- Responsive UI/UX Design
- Dashboard Layouts
- User Journey & Navigation Design
- Database Architecture
- System Architecture Design

3. Contractor Management System (CMS) Development

The CMS platform will include the following modules:

Contractor Portal

- Online contractor registration
- Application submission and renewal
- Document upload and management
- Status tracking and notifications

Department Officer Portal

- Role-based login access
- Approval and verification workflows
- Dashboard and monitoring tools
- Report generation and analytics

Admin Panel

- User and role management
- Workflow configuration
- Complaint and grievance management
- Archive and audit management

Reporting & Analytics

- MIS reporting
- Dashboard analytics
- Activity tracking
- Department-wise monitoring

Notification & Communication

- SMS and email notifications
- Alert management
- Status updates and reminders

Optional Integrations

- Payment Gateway Integration
- DSC (Digital Signature Certificate) Integration
- Third-party API integrations

4. Security, Testing & Quality Assurance

This phase includes:

- Functional testing
- Integration testing
- User acceptance testing (UAT)

- Security and vulnerability checks
- Performance optimization
- Data validation and audit tracking

Deliverables:

- Test Reports
- Security Compliance Support
- QA Documentation

5. Deployment & Go-Live Support

This phase includes:

- Server setup and deployment
- Application configuration
- Production environment setup
- Go-live assistance
- Deployment validation

Deliverables:

- Live CMS Application
- Deployment Documentation
- Technical Configuration Support

6. Training & Capacity Building

OrbitAvanya Tech LLP will provide:

- Administrator training
- Officer and end-user training
- User manuals and technical documentation
- Operational guidance and support sessions

Deliverables:

- User Manuals
- Training Materials
- Technical Documentation

7. Operations & Maintenance (O&M) Support – One Year

The engagement includes One Year O&M support covering:

- Application monitoring
- Bug fixing and issue resolution

- Technical assistance
- Minor updates and optimizations
- Performance monitoring
- Backup and maintenance support

Support Deliverables:

- Helpdesk & Technical Support
- Incident Resolution Support
- System Monitoring & Maintenance
- Periodic Health Checks

OrbitAvanya Tech LLP (AvanyaEdge) is committed to delivering a secure, scalable, transparent, and future-ready Contractor Management System aligned with the Irrigation Department's digital governance and operational modernization objectives.

Section 05 — How the Work Runs

Structured & Phase-Wise Execution Approach

The Contractor Management System (CMS) engagement is designed to run through a structured and sequential implementation methodology to ensure project quality, operational stability, security compliance, and successful deployment. Each phase of the project depends upon the successful completion and validation of the previous phase. This approach ensures smooth execution, proper coordination, controlled delivery, and minimized implementation risks.

The implementation methodology is intentionally designed to maintain transparency, accountability, quality assurance, and alignment with the Irrigation Department's operational and digital governance objectives.

This means:

- Project phases are executed sequentially based on approved deliverables and milestones.
- Requirement analysis and workflow validation are mandatory before development activities begin.
- UI/UX designs, architecture planning, and database structures must be approved prior to core development.
- Testing, security validation, and user acceptance processes are completed before production deployment.
- Any major change request or workflow modification may impact timelines, deliverables, and downstream implementation activities.
- The engagement includes coordinated development, deployment, training, documentation, and One Year Operations & Maintenance (O&M) support.

This structured execution methodology ensures that the Irrigation Department receives a fully integrated, scalable, secure, and future-ready Contractor Management System rather than isolated or partially integrated modules.

Engagement Timeline

The proposed implementation timeline for the Contractor Management System (CMS) is approximately 8–10 weeks for initial deployment, followed by One Year Operations & Maintenance (O&M) support.

Phase	Duration	Focus Area
Phase 1	Week 1	Requirement Gathering & Workflow Analysis
Phase 2	Week 2	UI/UX Design & System Architecture
Phase 3	Week 3–6	Core Application Development
Phase 4	Week 7	Integration, Testing & QA
Phase 5	Week 8	Deployment & User Acceptance Testing
Phase 6	Week 9	Training & Go-Live Support
Phase 7	Week 10 onwards	Operations & Maintenance (One Year Support)

The timeline may vary depending on:

- Final scope approvals
- Workflow complexity
- Integration requirements
- Departmental review cycles
- Change requests or additional feature requirements

Engagement Governance

The engagement will operate under a structured governance model to ensure continuous coordination, visibility, monitoring, and stakeholder involvement throughout the project lifecycle.

Project Coordination & Monitoring

The project execution process will include:

- Regular progress review meetings
- Milestone-based delivery tracking
- Requirement validation sessions
- Workflow review and approval discussions

- Issue and risk monitoring
- Implementation status reporting

Reporting & Communication

OrbitAvanya Tech LLP will provide:

- Weekly project progress updates
- Milestone tracking reports
- Issue resolution tracking
- Deployment and implementation status updates
- O&M support reporting during the maintenance phase

Review & Validation Workshops

The engagement may include:

- Requirement validation workshops
- Workflow finalization sessions
- UI/UX review meetings
- User Acceptance Testing (UAT) coordination
- Departmental training sessions
- Go-Live readiness reviews

Irrigation Department Responsibilities

For successful implementation of the CMS platform, the department will be required to provide:

- Authorized departmental coordinators and nodal officers
- Access to existing workflow and process documentation
- Timely approvals and feedback
- Availability of stakeholders for workshops and reviews
- Required hosting/server infrastructure (if applicable)
- Support for UAT and deployment activities
- Coordination for training and operational rollout

OrbitAvanya Tech LLP Team Allocation

The project will be executed by a dedicated multidisciplinary team consisting of:

- Project Manager
- UI/UX Designer
- Senior Software Developers
- Software Developers
- QA & Testing Engineers

- Database & Deployment Engineers
- Technical Support & Maintenance Team

The team will work collaboratively to ensure timely delivery, quality assurance, operational stability, and long-term support for the Contractor Management System (CMS).

OrbitAvanya Tech LLP (AvanyaEdge) is committed to delivering a secure, scalable, transparent, and efficiently managed CMS platform aligned with the Irrigation Department's digital transformation and operational modernization initiatives.

This proposal explicitly outlines the following scope considerations and implementation dependencies to ensure transparency, operational clarity, and alignment between the Irrigation Department and OrbitAvanya Tech LLP (AvanyaEdge).

Infrastructure & Third-Party Services

The proposed engagement covers the design, development, deployment, and maintenance of the Contractor Management System (CMS). However, the following services and infrastructure components are outside the core project cost unless specifically included through mutual agreement:

- Cloud Hosting / Server Infrastructure
- Domain & SSL Certificates
- SMS Gateway Services
- Email Services
- Third-Party API Integrations
- External Security Audits
- Hardware Procurement
- Data Center Infrastructure

These services may require separate procurement, subscriptions, or departmental arrangements.

Workflow & Policy Dependencies

The CMS platform will be developed based on workflows, approval hierarchies, operational rules, and process documentation provided by the Irrigation Department. Any major workflow changes, policy modifications, or additional requirements introduced during or after development may impact timelines, costs, and implementation planning.

Successful implementation depends upon:

- Timely stakeholder approvals
- Availability of departmental coordinators
- Validation of workflows and process requirements
- Timely review and feedback cycles

User Adoption & Operational Execution

The engagement includes system development, deployment, training, and operational support. However, effective usage and operational adoption of the CMS platform depend upon departmental coordination, user participation, training attendance, and internal process implementation by the department.

OrbitAvanya Tech LLP will provide:

- User training
- Technical guidance
- Documentation
- Go-Live assistance
- One Year Operations & Maintenance (O&M) support

Operational enforcement, policy execution, and departmental usage compliance remain under the department's administrative control.

Future Enhancements & Expansion

The proposed CMS platform is designed with scalable architecture to support future enhancements, integrations, additional modules, and workflow expansion. Any future feature additions or advanced integrations beyond the approved scope may require separate analysis, timelines, and commercials.

Examples may include:

- Mobile Applications
- Advanced AI Analytics
- GIS Integration
- Payment Gateway Expansion
- Digital Signature Integration
- Integration with External Government Platforms
- Advanced Reporting & BI Dashboards

Project Scope & Technology Considerations

This engagement focuses on delivering a secure, scalable, and government-ready Contractor Management System (CMS) aligned with the approved project scope and operational requirements of the Irrigation Department.

The engagement covers:

- Requirement Analysis
- UI/UX Design
- Application Development
- Testing & QA
- Deployment & Go-Live
- Training & Documentation
- One Year O&M Support

Product policy decisions, workflow governance, infrastructure procurement, departmental operational policies, and long-term administrative management remain under the authority of the Irrigation Department.

OrbitAvanya Tech LLP (AvanyaEdge) remains committed to delivering a reliable, transparent, future-ready, and scalable CMS platform aligned with the department's digital transformation and operational modernization objectives.

Section 07 — Why OrbitAvanya Tech LLP (AvanyaEdge)

OrbitAvanya Tech LLP (AvanyaEdge) is well-positioned to successfully execute this engagement due to its expertise, technology capabilities, and strong focus on enterprise and government digital transformation solutions.

Expertise in Government & Enterprise Solutions

OrbitAvanya Tech LLP specializes in developing secure, scalable, and workflow-driven applications for government departments, enterprises, educational institutions, and organizations requiring centralized digital management systems. Our expertise includes ERP systems, workflow automation, e-governance platforms, document management systems, and digital transformation solutions.

End-to-End Implementation Capability

The engagement covers complete end-to-end services including:

- Requirement Analysis
- Workflow Planning
- UI/UX Design
- Application Development
- Testing & QA
- Deployment & Go-Live Support
- Training & Documentation
- One Year Operations & Maintenance (O&M) Support

Our team provides dedicated technical, operational, and implementation support throughout the project lifecycle.

Scalable & Future-Ready Technology Architecture

The proposed Contractor Management System (CMS) will be developed using modern, secure, and scalable technologies designed to support:

- Centralized contractor management
- Workflow automation
- Real-time monitoring & reporting
- Role-based access management
- Future integrations & expansion
- Secure document handling
- Analytics & operational transparency

The platform architecture is designed for long-term maintainability, flexibility, security, and scalability.

Dedicated Team & Operational Support

OrbitAvanya Tech LLP has a dedicated multidisciplinary team consisting of:

- Project Managers
- UI/UX Designers
- Full Stack Developers
- QA Engineers
- Database & Deployment Specialists

- Support & Maintenance Engineers

Our structured execution methodology, regular reporting process, training support, and One Year O&M services ensure reliable implementation, operational continuity, and long-term project success.

OrbitAvanya Tech LLP (AvanyaEdge) remains committed to delivering a secure, transparent, scalable, and future-ready Contractor Management System aligned with the Irrigation Department's digital governance and operational modernization objectives.

Section 07 — Why OrbitAvanya Tech LLP (AvanyaEdge)

OrbitAvanya Tech LLP (AvanyaEdge) is strategically positioned to successfully execute this engagement due to its expertise in enterprise application development, workflow automation, digital transformation, and government-oriented technology solutions.

Specialized Expertise in Digital Governance Solutions

OrbitAvanya Tech LLP specializes in designing and implementing secure, scalable, and workflow-driven platforms for government departments, enterprises, educational institutions, and organizations requiring centralized operational management systems. Our expertise includes Contractor Management Systems (CMS), ERP platforms, workflow automation, e-governance applications, document management systems, and digital transformation initiatives.

The proposed CMS engagement aligns directly with our core capabilities in building secure, transparent, and operationally efficient digital platforms.

Proven End-to-End Execution Capability

The proposed engagement includes complete end-to-end implementation services covering:

- Requirement Analysis & Workflow Planning
- UI/UX Design & Architecture
- Application Development
- Testing & Quality Assurance
- Deployment & Go-Live Support
- User Training & Documentation
- One Year Operations & Maintenance (O&M) Support

OrbitAvanya Tech LLP follows a structured implementation methodology designed to ensure project quality, transparency, timely delivery, operational stability, and long-term maintainability.

Modern & Scalable Technology Architecture

The proposed Contractor Management System (CMS) will be developed using secure, modern, and scalable technology architecture designed to support:

- Centralized contractor management
- Automated approval workflows
- Real-time monitoring & reporting
- Role-based access management
- Secure document verification
- Analytics & dashboard systems
- Future integrations & scalability

The platform is designed to support future departmental expansion, policy changes, operational growth, and digital governance initiatives.

Dedicated Team & Long-Term Support Commitment

OrbitAvanya Tech LLP operates with a dedicated multidisciplinary team consisting of:

- Project Managers
- UI/UX Designers
- Full Stack Developers
- QA & Testing Engineers
- Database & Deployment Specialists
- Technical Support & Maintenance Engineers

Our engagement approach focuses not only on successful software deployment but also on operational adoption, training, technical assistance, and long-term system stability through structured One Year Operations & Maintenance (O&M) support.

OrbitAvanya Tech LLP (AvanyaEdge) remains committed to delivering a reliable, secure, scalable, and future-ready Contractor Management System aligned with the Irrigation Department's digital transformation and operational modernization objectives.
